

## **Smart Phones Too Smart for Parents: News Organizations Say Children Are At Risk of Being Caught with Porn In Their Pocket**

*In The Digital Age Questions Regarding Pocket Porn, Social Networks, Sexting, Cyberbullying, ID Theft & More Arise. Dave & Bill Are Educating Families on the Right Solutions Now!*

Salt Lake City, UT ([PRWEB](#)) August 10, 2010 --After years of research and building several highly respected information portals and community websites, the CyberHood Watch partners, Dave & Bill, are sharing their findings with their listeners and in their new CyberHood Watch Community.

"The goal of The CyberHood Watch partners is for [The CyberHood Watch Community](#) to become a recognized community, and to effect positive changes on a local, State, and National level, and to assure a protected, secure, and safe digital life for its digital citizens," echoed both partners.

With the influx of smart phones being purchased, more and more adult content apps and software have been and are being created. CBS News reported on July 29th 2010 that the Porn Industry Sees Opportunity In Latest iPhone. These apps are finding their way into our children's phones and ultimately into their pockets where they are available 24 hours a day without parental supervision. Laws are not keeping up with technology, and the laws that are on the books don't leave police the room to help protect them if they are found with these images.

Parents need resources to help educate their children on the dangers of the internet as well as the danger of having images and content on their phones that could damage their futures. The CyberHood Watch brings in guests such as lawmakers, industry leaders, corporations, and advocates who weekly share their findings and resources to help parents and families.

### **Utah Attorney General makes a public commitment to The CyberHood Watch partners, Dave & Bill...**

"I am really pleased to know more about what you're doing, and I told you in private, but I will make a public commitment right now to get you out to the National AG meetings, where we give opportunities to present new ideas in a panel discussion, and let other AGs know about what's going on. And that way it will spread, and you'll get more support, and I'll follow through on that", said Mark Shurtleff, Utah's Attorney General in his interview with Dave & Bill on CHWradio.

Dave & Bill, host CHWradio, and interview authorities worldwide who provide The CyberHood Watch Community a wealth of wisdom and solutions for the digital protection of children, parents, grandparents, educators, trusted adults, and businesses on how to enjoy the Internet securely and safely.
